

# Device Management & Deployments

## BRAdmin Professional 4

**brother**  
at your side

Manage your network-connected devices with BRAdmin Professional 4 and take advantage of real-time status updates, mass configuration, and enhanced security. Seamless integration with Microsoft Azure Storage platform enables IT administrators to remotely manage devices across various locations.

### Devices View

Customizable main screen for easy device assessment, installable on multiple PCs to share administration tasks.

### Smart Filters and Groups

Dynamic filters automatically group devices for simplified monitoring and management by model, serial number, contact, and more.

### Settings

Device configurations allow administrators to automate preferred device settings across multiple machines.

### Azure Integration

Device configurations allow administrators to automate preferred device settings across multiple machines.

## Configure specific device settings for policy compliance with Master Settings and Autoconfiguration:

**Master Settings** are preferred settings that administrators can apply to devices:

- Updating device firmware automatically.
- Sending settings files to devices.

**Frequency:** Run on daily or weekly schedule.

**Autoconfiguration** ensures that devices are consistently set to the customer's standard settings.

- Automatic configuration for devices that don't meet a set criteria.
- Applying specified settings via BRAdmin Professional 4 once the device is discovered.

**Frequency:** Monitor devices daily, weekly, monthly, or in a specified time period, e.g. every "X" hours.

Features	Master Settings	Autoconfiguration
Change device password	✓	✓
Send configuration files	✓	✓
Firmware auto-update	✓	✓
Configure Value Services	✓	✓
Activate Value Services		✓
Set trigger to send settings file <sup>1</sup>		✓
Apply various settings <sup>2</sup>		✓
Monitor target devices		✓
Set device password to company policy without current password		✓

<sup>1</sup> Uses trigger when device discovery is run.

<sup>2</sup> Settings can be applied using smart filter, groups, profiles, serial number, model name, node name, MAC address, and IP address.

### DID YOU KNOW?

Choose **Autoconfiguration** to detect new devices on the network and automatically push the desired security configuration.

### Configure the following using BRAdmin Professional 4:

#### Run on your local network

Manage and monitor devices on your local network.

#### Run on Microsoft Azure

Manage devices on multiple isolated networks and compatible Brother devices via cloud. No local software needed.

#### Monitor USB connected devices

Easily manage and monitor devices connected via USB on local network.

### Take control with BRAdmin Professional 4 advanced features:

#### Microsoft Azure Profile View

Enables IT professionals to remotely manage devices in multiple isolated locations.

- View multiple profiles from a single dashboard.
- Store device data in Azure cloud storage.
- Offers robust security for secure access and remote management.

#### Devices View

Offers the capability to instantly monitor page counts and supply levels.

- Easy reference user interface provides access to common tasks.
- Identify device status with color-coded indicators.
- Keep track of toner and ink volume levels.

#### Tasks View

Allows IT administrators to quickly identify any errors for faster issue resolution.

- Monitor the status of scheduled and one-off tasks.
- Quickly identify issues or failures.
- View active tasks and logs for Notification Alerts, Master Settings, and Autoconfiguration.
